Diesel Generator Auxiliary Systems and Instruments

This book is written for all people working in diesel generators business and specially for design and technical sales engineers who are willing to increase their knowledge in this subject. The book has nine chapters and covers all diesel generator auxiliary systems and instruments. It provides useful information, and is considered to be a good introductory book on diesel generator design. The book covers the diesel engine ratings and categorization, engine components, speed governing, electronic engine controls, fuel system, cooling system, coolant specs, lube oil system, oil specs, exhaust system, exhaust muffler and pipe sizing, electric starting system, battery and battery charger sizing, genset sensing instruments (switches, senders, RTD's, TC's, MPU's), genset indicating instruments. The book includes some tutorial questions at the end of each chapter.

The MEP series of Military Generators are rugged, durable and incorporate proven diesel engine technology. This book is the generator set repair parts manual and also incorporates general support instructions. It is being republished to assist enthusiasts, restorers, and aftermarket owners who use or wish to use these generators outside of military use.

Diesel Generators Design and Applications Training Reference

This book is an authoritative reference work covering the range of mechanical and electrical topics embodied in the practical design and application of diesel generating plant.

The Corps of Engineers (CE) Test Procedures document has been prepared in a format similar to the referenced MIL-STD-705B test methods to provide for easy implementation by CE district and division personnel. The procedures provide for acceptance testing large diesel engine-generator sets--up to 6000 kW capacity range--intended for installation in fixed military facilities as Class A (Prime), Class B (Standby), or Class C (Emergency) electrical power generation sources. This document provides a list of MIL-STD-705B test methods which are directly applicable for acceptance testing large diesel engine-generator sets. In addition, the document provides new test procedures numbered CE-TP-1001 through 1004, designed specifically for acceptance testing large stationary diesel engine-generator sets intended for electrical power generation within fixed military facilities.
